

Implantando um Modelo

Uma maneira de fazer com que outras pessoas usem seu modelo é implantá-lo via Aplicativo Web ou Web App. Isso permite que os usuários interajam com seu modelo como um site. Eles podem fazer upload da imagem com uma interface de usuário e visualizar os resultados. Vamos ver como podemos implantar um aplicativo web no CV Studio.

Assim como antes, faça upload de suas imagens e rotule-as:

CV Studio

Transfer_learning_with_CN...

Classification project

Use the tool below to select & label the images in this project. The images will be used to train a model in the next step. If you need to upload images, go so on the Upload Images page.

Applications

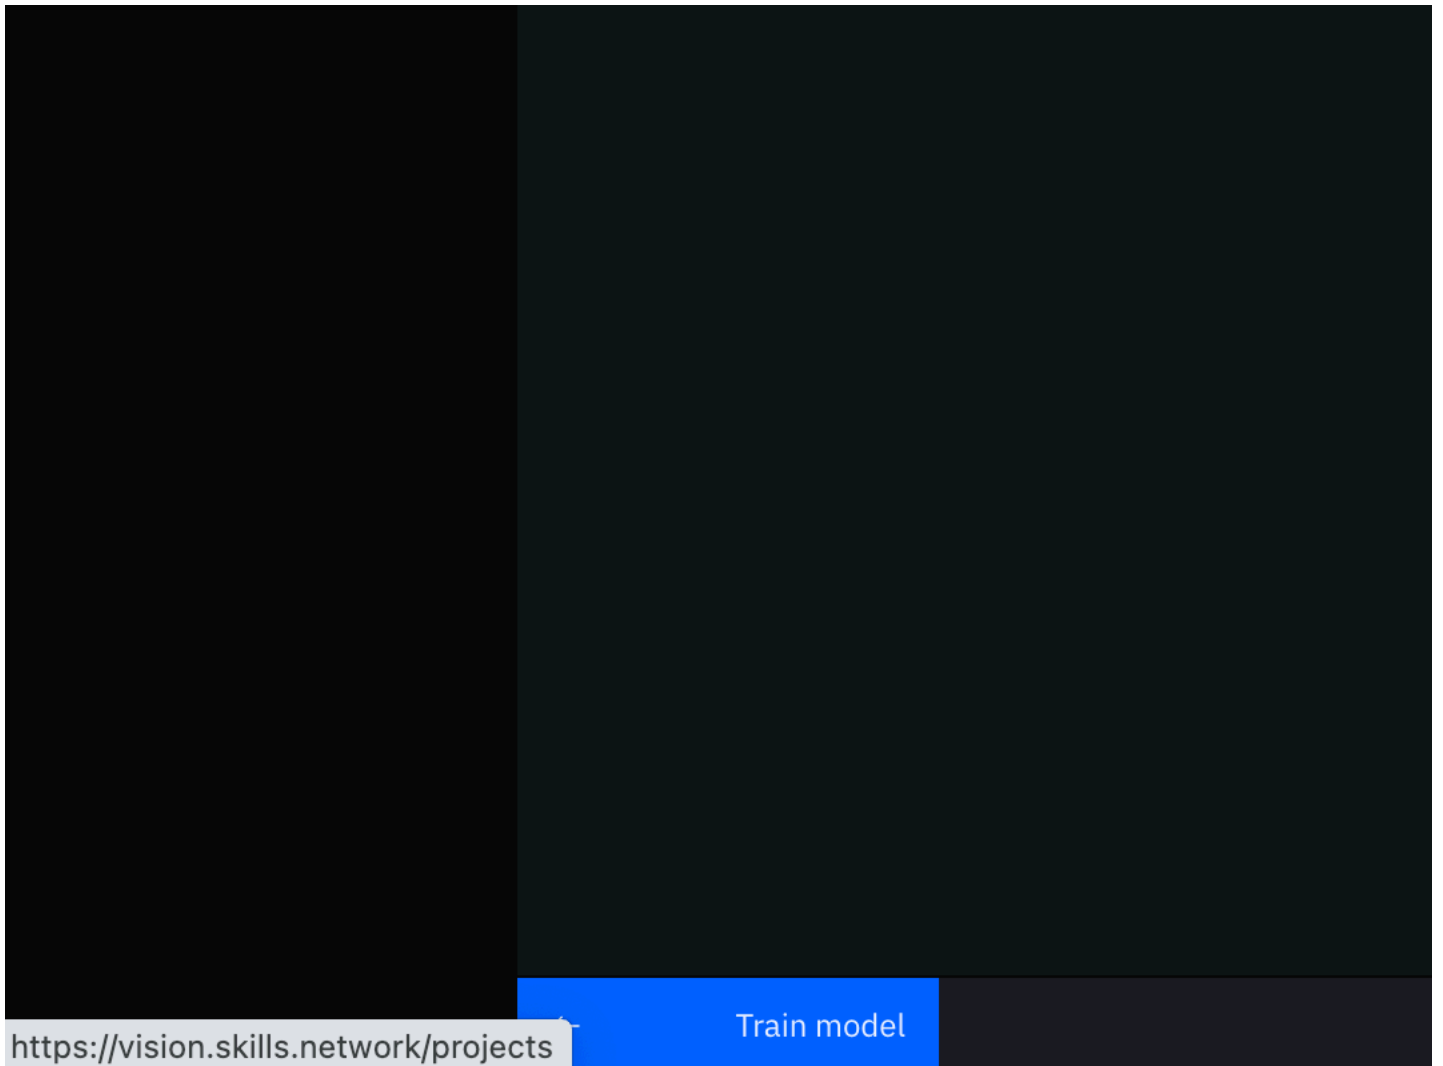

The table below contains a list of applications in this project. Applications are created using trained models in CV Studio. When creating a [new application](#), you can choose a training run in this project or from a public source.

Train model

Preencha a janela da seguinte forma: dê um nome ao seu modelo, selecione **Modelos neste projeto**, selecione **TESTE - Implantação do seu Modelo na Nuvem com 1 clique (Code Engine)** e selecione o modelo da execução de treinamento:

New Application

Create an application to put a model to use.

Extract model from training run

train ResNet

Deployment method (select one)

☐ Notebook

☐ Build an App (Cloud IDE)

☒ TEST - 1-click Deploy your Model to Cloud (Code Engine)

☐ 1-click Deploy your Model to Cloud (Code Engine)

*Note: this deployment method is for testing purposes only. Applications created with this method have an expiry date set, after which your application will be inaccessible.

Select Code Engine Image

Classification with CNN and PyTorch

This is a demonstration of a 1-click Deployment to Code Engine. The result of this is a webapp that classifies images with your trained model.

Quando o **Status** estiver **pronto**, selecione **URL**. Isso pode levar algum tempo.
